

Connecting Bees and Their Keepers

Cover & Above Photos by: Gabriella Showalter

Welcome to Beeline, your supplier for all your beekeeping needs! Whether you are a hobbyist or a commercial beekeeper, we are here to help you grow and succeed in your passion and care for bees!

We are independently owned and operated businesses, working together to provide you with the same products, same quality, and same service all across the United States. The Michigan Branch uses Eastern White Pine and the Washington Branch uses Ponderosa Pine. We do not have a central headquarters.

Contact us or shop online and get free shipping for most products over \$150 at www.beelinewoodenware.com. Or you can contact your nearest branch for all catalog requests, product questions, order placing, and dealership inquiries. If one branch receives an order from someone in another branch's territory, all information will be transferred to the nearest branch so that you receive the cheapest shipping option possible.

Our Beeline staff is ready to answer any questions you may have about bees, beekeeping, and our products. On page 3, find contact information, directions and maps for all branches. We welcome you to come meet us and purchase at our stores!

Reehive Parts

What's this stuff like?

We'll describe our woodenware as well as we can and hope your purchase matches your expectation. Want something we don't offer? Custom projects and modifications will be considered.

Wood grade options:

Woodenware grades have historically been divided into three grades—select, commercial, and budget. Those grades are all still available from Beeline, however, in this catalog we are providing pricing for only two choices that we have found to be most popular—commercial and mill-run. If you are interested in select or budget, feel free to contact us.

Select is available at higher prices and is as near to perfect as we can humanly and practically get it. We aim for no knots, splits or milling defects. Some variation in the width of box panels, due to unavoidable shrinkage after milling, can occur. Handholds may have a little chipping at the end.

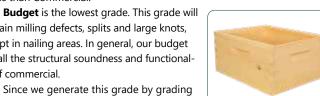

For **Commercial**, our objective is structural soundness. There will be no holes or potential holes, large splits or milling defects. We attempt to keep

knots at least 1 1/2" from nailing areas. Knots, sometimes rather large, are allowed within the panel and on top and bottom edges as long as they are structurally sound.

We attempt to turn the best face out and pass it by commercial standards. Missing knots on the inside of the edges are permitted as

Millrun is roughly 50% Commercial and 50% Budget. Many panels are clean and knot free. However, minimal milling defects and large knots are allowed. When you get millrun, you can be pretty confident you are getting structurally sound woodenware for cheaper prices than Commercial.

contain milling defects, splits and large knots, except in nailing areas. In general, our budget has all the structural soundness and functionality of commercial.

down from better grades, or it's worked into millrun, it is an accumulative product and frequently unavailable. Contact us for availability and pricing.

Assembling

If you choose to assemble yourself, we recommend several methods for fastening our products. Please ask for our free Assembly Instructions

Booklet. Also, see pages 35 & 36 of this catalog for some of our suggested fasteners.

When we assemble, we use jigs, some automated machinery, and other methods to ensure a square and correct finished product. We fasten everything with staplers. Frames and Inner Covers are glued and stapled. If you

desire other products to be glued, we can do so for an extra fee but we find our box joints, stapled or nailed well, do not need glued for longlasting structural and functional integrity.

Keep in mind that assembly adds considerable bulk to a product and incurs higher shipping cost.

Copper-Dipping

Copper-dipping uses a copper monoethanolamine solution that inhibits rotting by soaking into the joints, end grain, and staple penetrations. It can be painted with any good grade oil or latex paint. Only available from the Michigan Branch.

Painting

We will attempt to give you the most economical, quality job possible by using a good grade latex for two coats. We spray boxes on a stack which means that the upper and lower surfaces do not get painted. Lids

and bottom boards get complete first coats. Sides and exposed surfaces are given a second coat. Because inner covers are usually not exposed we do not offer painting on them.

Our standard paint color is white and is used unless otherwise specified. We can do any other color using basic color chips for reference, for an extra \$50 per color (non-white) per job.

We attempt to allow plenty of drying time before shipping your painted product but it is impossible to ensure that they will arrive with no damage. If you desire touch up paint we can arrange to send some along.

Wax Dipping

This is not a quick dunk into liquid paraffin. This is not wax coating. It

is wax impregnating. Every part of the wax dipping process has been optimized for maximum longevity. Using a special micro-crystaline wax formula that is heated to 300°, the component is submerged for 3 minutes. The wax is forced into the wood and the moisture and other "unfriendly" chemicals are forced out. The result

is a component that will last up to 20 years with no maintenance. Though it cannot be painted, it will not rot or deteriorate, and the natural wood appearance is preserved though will darken over time.

Introduction to Hive Parts

COVER / LID

The roof for your hive to keep the bees snug and dry. Beeline offers six styles. The Garden styles look nice in your back yard garden. The Telescoping Lid (pictured here) or the plastic Ultimate Hive Cover is most common for a back-vard beekeeper. Migratory or Plywood lids are made for commercial beekeepers stacking their hives

INNER COVER

Buffer between lid and bees; can provide ventilation, especially if the Screened Inner Cover is used. The raised panel style (shown here) is the most common. This style includes an optional upper entrance. Flat-sided inner covers work similarly. The Screened Inner Cover is used mainly for ventilation in summer months.

TOP FEEDER

Used for feeding large quantities of syrup in early summer and late fall months. Inboard feeders and other feeding options are also available. A ziploc bag with several pin pricks set above the Brood Chamber works best for clusters in early spring or late

SHALLOW SUPER

A super is where the bees put the honey. Beeline offers two sizes, but we recommend each beekeeper choose a size and stick with it. The shallow is nice for ladies or the elderly who do not wish to carry much weight. It also works well for comb honey. Beeline offers plastic or wax foundation for shallow frames.

MEDIUM SUPER

A super is where the bees put the honey. Beeline offers two sizes, but we recommend that each beekeeper to choose a size and stick with it. The medium size is the most common super. Beeline offers plastic or wax foundation for medium frames.

QUEEN EXCLUDER

A metal gridwork with slots large enough for worker bees, but too small for the queen; excludes the queen from laying eggs in the honey super.

DEEP HIVE BODY

The brood chamber is the year-around home for the bees. Often two deeps (also called brood boxes) are used to give the queen more room to lays her eggs. In winter you will reduce the hive to one or two boxes so that the bees can conserve their heat. Beeline offers either plastic or wax foundation for deep frames.

BOTTOM BOARD

The base of your hive, and "front door" where the bees enter and leave the hive. Beeline has two styles to choose from. The Screened Bottom Board (pictured here) is nice for ventilation and with the Mite Tray, is useful for monitoring your mite count. The Reversible style is the standard bottom board.

We are now wax dipping!

Wax dipped hive components are known to last for 20 years or more with zero maintenance, and no need to reapply wax later. Wax dipped hives CANNOT be painted.

The process

Moisture is forced out of the wood, and replaced with the wax.

Wood is impregnated with HiveGuard, a microcrystaline, paraffin blend, at 300° for a minimum of 3 full minutes.

Rot will be eliminated and the beautiful, natural wood will be preserved for years to come, though it will darken over time from sun exposure.

Hive Bodies & Supers

Beeline boxes: the logical choice.

Please note: Boxes made by the Washington Manufacturing Branch may be different. Please contact them for details.

Options:

- Four Sizes: 9 5/8", 7 5/8", 6 5/8" & 5 11/16"
- 10-frame, 8-frame or 5-frame
- Select, Commercial, Budget or Mill-run Grades
- Unassembled
- Assembled

- Treated/Dipped with Copper Monoethanolamine*
- Painted White (Custom color optional*)
- Wax Dipped with HiveGuard
- Custom ID Stamping (Additional fee per box)*
 - * Only available from the Michigan Branch

Need one or thousands? We can do it! Just contact us.

Deep Hive Body

Our deep boxes are standard 9 5/8" in depth, and are milled with 5/8" frame rests and deeply profiled, uppercut handholds that are easy to grip and allow water to run off the bottom. With a full top joint plus snug finger joints all the way around, these boxes are built for the long haul.

White is our standard paint color. We can paint your boxes a custom color with a \$50 fee per color per order. The Michigan Branch offers custom ID stamping for a fee. Ask for details.

Commercial and Mill-run grades are produced and stocked on a regular basis. Contact us for select or budget grade availability and pricing.

Deep Economy Nuc Kit

If you purchase 5-frame nuc lids, deeps, and bottom boards separately, you will get a narrow version of the 10 frame equipment described in previous pages. However, the economy nuc gives you a much cheaper option. Excellent for making up nucs to sell. These economy nucs consist of a deep nuc hive body (9 5/8" wide), a simple board for the bottom with 3/4" strips on top to make an entrance, and a simple migratory style lid made of a board with dropped cleat front and back. The inboard feeder on page 43 works well with these. Finger joint listed, but rabbet joint is available upon special request.

Contact us for commercial or budget grade availability & pricing.

Plastic EZ Nuc

This 5-frame, corrugated, plastic nuc box from Jester Bee Company is well-ventilated and durable. It offers a cheaper alternative for nuc production and handling. The snap action entrance closure makes closing and transportation a breeze. There is also a knock-out hole that can accept the EZ Nuc Feeder (on page 42) providing no-mess top-feeding.

Nuc Transport Bag

Don't want to risk a sting while transporting your nuc? This breathable, durable, mesh bag allows your bees to get the air flow they need and the drawstring keeps the bees securely where they belong. Ideal for nuc-raisers to have available for their customers.

Beeline frames: the logical choice.

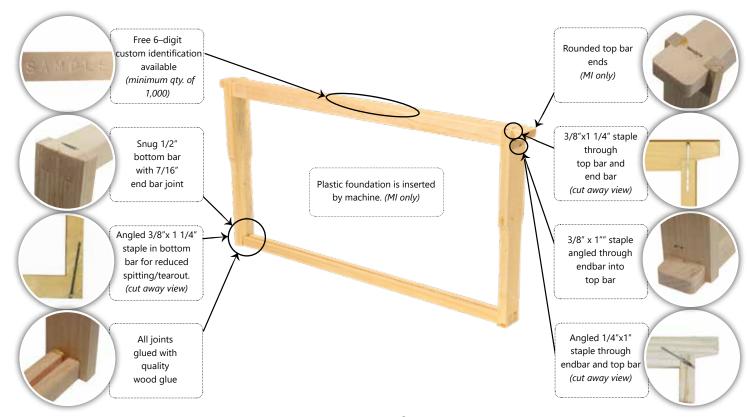

Options:

- Four Sizes: 9 1/8", 7 1/4", 6 1/4" & 5 3/8"
- Commercial or Part–Budget Grade
- Unassembled
- Assembled (see details below)
- Wedged or Grooved Top Bar
- Grooved or Split Bottom Bar
- Holes in End Bars for Wax or No holes for Plastic
- Rounded Top Bar End (MI only)
- Square Top Bar End (WA only)
- Sturdy 1/2" Bottom Bar (MI only)
- Full 7/16" End Bar (MI only)
- Full 3/4" Top Bar

When we assemble:

At our Michigan Branch, all frames are assembled with an automated machine, designed and built by Beeline staff to ensure high speed operation and consistent glue and fastener placement. At our Washington Branch, all frames are assembled by hand using our frame assembly jigs as described on page 18.

Need just ten? Or tens of thousands? No problem.

Plastic Frames - 1 Piece

Although not quite as sturdy as wood, these one-piece plastic frames are very durable and will last a long time in your apiary. Pierco is the original inventor of 1-piece plastic frames and they have stood the test of time. No assembly is required! Deep frames are black, which allows you to see the eggs easier. Medium frames are white. They are double waxed. Sold in full case quantities only.

^{**} White plastic foundation is our standard for medium frames. Black or yellow is available upon special request.

Split Top Bar Frames

Our split top bars make a convenient alternative for fast preparation for comb honey production. Assemble the frame and then, with the aid of a board with two nails to spread the split, slip the cut comb foundation or starter strip into that split. When removed from the nails, the top bar will clamp the foundation and the frame is ready for the bees. Available from the Michigan Branch only.

Green Drone Frames

This wax coated plastic frame can be used in two ways. Raise more drones of your favorite genetics to increase drone population for mating purposes. But, perhaps more importantly, in this age of mites, use it as a tool to reduce mite population. Put these drone frames—you will always recognize them by their conspicuous off-green color—into the brood chamber. One per hive is enough. Pull the frame in three weeks when the drone brood is capped and replace with another drone frame. Put the removed frame in the freezer. Repeat the cycle every three weeks. Mites prefer drone brood and by doing this you will greatly reduce your mite population. But WARNING! Keep track of your timing! If those drones start emerging before you pull the frame, you have created a mite farm instead of a mite eliminator!

| Deep | .65 # | GDD | 4.62 |
| Medium | .56 # | GDM | 4.46 |

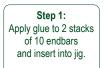

Frame Assembly Jig

Make your frame assembly easier with our improved assembly jig. Now built to accomodate both deep and medium sizes in one jig! Securely clamp the end bars for 10 frames, glue, and add top bars and bottom bars and nail or staple. See instructions for use below.

| | SHIP WT: | CAT# | Price |
|-------------------------|----------|-------|-------|
| Deep & Medium Combo Jig | 13 # | FAJDM | 90.65 |
| Shallow | 7.95 # | FAJS | 44.76 |

By following these steps, you can ensure a solid square frame, using this assembly jig.

Step 2: Insert top bars into endbars and staple with 3/8" crown 1 1/4" leg

Step 3:

Cut Comb Wax Foundation

Make comb honey—that coveted delicacy! Insert these sheets into shallow or medium frames (page 17) and place supers on your hives during a good nectar flow. Harvesting is simple: just cut around the inside of each frame, then into squares. Enjoy it, sell it, or give it away! No special extractors required to harvest this crop.

| Size | SHIP WT: | CAT# | sheet | 12 1/2# box | 25# box | 5+ 25# box |

Simplekomb Frame Inserts

Finally there is a simple, no-mess, economical way to produce comb honey. Paint the honey comb embossed surface of the Simplekomb plastic with a thin layer of pure beeswax. Fold the insert back and snap into the one side of a medium frame so that the waxed surface is facing outward. Repeat for the other side of the frame. Place in a strong colony during a heavy honey flow and remove when filed. Remove each side, fold the lid to the front and snap in place over the completed comb of honey. Break the 4 sections apart and sell. Done

well, you can sell less honey for more profit. A full super of 20 inserts (2 for each frame) could yield up to 80 saleable comb honey sections.

Crimp Wire Wax

This excellent quality, 100% beeswax foundation is the traditional option for your new frames. They feature embedded wires for structure with hooks on one edge. Install in wedged top bar frames. Wire hooks are pinched under the frame wedge. Cell size: 5.4 mm

Due to fragility, shipping wax during cold weather is discouraged and done only at your risk, with the understanding that there could be some breakage. We will not assume responsibility for replacement in this case. Shipping in warm weather is preferred.

Equipment you may need to use wax foundation...

Orange Prices Qualify for Free Shipping on Orders over \$150!

Plastic Foundation

With the quality Pierco foundation we carry, coated with 100% pure cappings wax, expect your bees to draw the comb fast and uniform.

While all sizes are available in black, white, and yellow, we recommend black for deep inserts and white or yellow for medium and shallow. Black is preferred for deeps because it is easier to see eggs. White or yellow is preferred for honey supers because it allows you to evaluate honey color better. The cell size is 5.4 mm.

The single wax coating draws well and the double waxed coating draws better. Triple wax coating is available upon special request.

Screened Bottom Board

We designed this bottom board to be sutrdy, versatile, and easy to use. 1/8" mesh screen covers the entire floor for optimal ventilation and to allow mites to drop through. 3/4" high entrance on one end. A white corrugated plastic tray can be slipped into the back below the screen. This allows mite drop monitoring, and a way to cut off hive ventilation as needed. Mite trays can be purchased separately.

Ultimate Hive Stand

The ultimate of hive stands. Called that by the manufacturer, we will underscore it.

Features:

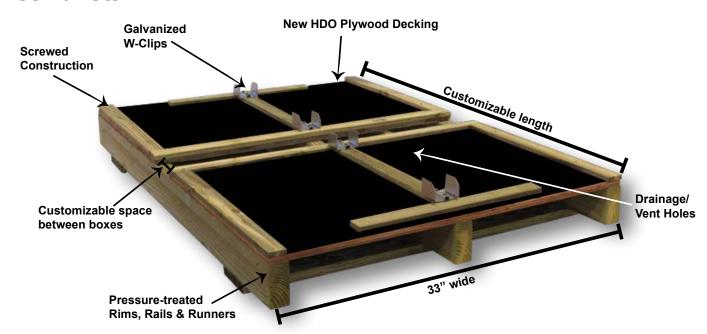

- Won't rot or rust.
- Won't collapse.
- Gets hive away from pests such as
- Improves ventilation.
- Raises hive to better working height.
- Available for 8 and 10 frame hives.
- Can be filled with sand for added stabil-
- Can be screwed to the hive for better security

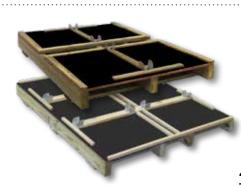

It even comes with attached, swing-out frame rests with right or left hand options. Sound ultimate? Absolutely! And we haven't even sung all its praises. Get one (or more) and see for yourself.

Bee Pallets

Solid Bee Pallets

These heavy-duty bee pallets are made with pressure treated rails and runners and decked with new HDO plywood. Spaces for 4 hives or 6 hives held in place with W-Clips that gives 1/2" between hives from side to side and 1 1/2" from front to back. Ventilation slot, drain holes and screwed construction make these pallets ready for the rough handling that characterizes commercial beekeeping. Nests when stacked.

4- Way Pallets measure: 45-48" x 33". 6-Way Pallets measure: 50" x 44".

Dura-Draft

Designed & Manufactured by Beeline

Smokers with Dura-Draft Bellows

With our new and improved Dura-Draft Bellows fastened to heavy-duty imported smoker cans, you are getting a superior smoker built for the long haul! Great for hobbyist and commercial beekeepers alike!

What is superior about the Dura-Draft Bellows? Across the industry, bellows are the weak part on a smoker. The fabric is prone to punctures, and holes develope after much flexing. The plywood deteriorates with weathering. Our bellows come with weather resistant MDO

plywood and a high quality UV resistant canvas. A second layer of canvas at the bottom reinforces the hinge point, and makes it impervious to punctures.

| Item | SHIP WT: | CAT# | 1-9 | 10+ |

Frame Perch

This sturdy, stainless steel frame perch holds three frames, making a handy tool for treating your frames of bees with care.

Frame Spacing Tool

Space the frames in your honey supers uniformly with these spacing tools to ensure that the comb gets drawn and capped correctly. Nine frames in a box works well in a moderate honey

flow and still makes uncapping easier. If there is a good honey flow, eight frames are even better. Gets nice, fat frames of honey, and allows for more honey in a super with one less frame.

Hive Butler Storage Tote

This is a great tool for the beekeeper with year around uses. With built-in frame rests, frames are adequately spaced and securely held in place. With the solid lid option, the tote is perfect for bringing your honey frames from the beeyard to your extracting room, or to store extra drawn frames in the off season. Storing frames with these greatly reduces risk of wax moth infestation. The ventilated lid opens more options. The tote can be used in the bee yard during inspections, collect swarms, or to transfer frames of bees from yard to yard. Extra space below

the frame keeps your queen cells from getting damaged. Durable and stackable. Made in USA with Food grade, BPA free plastic. Dimensions: 24" long, 20.5" wide and 12" high.

| Size | SHIP WT: | CAT# | Price |

Swarm Commander Products

Swarm Commander's Premium Swarm Lure out-performs many other lures, inlcuding the common lemongrass oil. Available in four different application methods. Expect to catch many swarms when applying them correctly. All versions have a 2-year shelf life when stored in a temperature controlled area.

Premium Lure Spray - 2 oz.

Lure bees into your swarm trap with Swarm Commander spray, a pheromone specially created to attract feral honeybees. With only 2 sprays needed per dose, this bottle will last for hundreds of

applications. Safe and eco-friendly. 2 yr. shelf life.

SHIP WT: CAT# Price
.05 # SCLS 36.64

Swarm Lure Gel

This gel version of the Swarm Commander's Premium Swarm Lure will last up to 3 weeks in your trap, compared to the spray version which lasts 7-10 days per application. Convenient 1 oz. squeeze tube.

2 yr. shelf life.

SHIP WT: CAT# Price

Traps

Queen Rearing

Propolis Trap

With this plastic propolis trap you can harvest quantities of clean propolis and sell another product from your hive. Put on the top of your hive in the place of the inner cover, block the hive cover so that light can get into the hive. The bees will fill the cracks in the trap in an effort to block the light and seal the hive. To harvest, place propolised trap into a plastic bag and freeze. Once frozen

Pollen Trap

time of greatest propolis collection.

Our Beeline-designed, quality pollen trap is designed for maximum trapping and versatility. Must be used on the bottom of the hive.

- Drawer can be inserted from either side, allowing for palletized usage.
- Weather proof drawer; pollen will not get wet.
- Full side drawer front; bees will not try to get in at wrong places.
- Escape cones and plywood covered area keeps debris out of pollen.
- Removable trapping strip to allow switching from trapping to no trapping.
- Entrance that stays the same for trapping and no trapping.
- Works with clip pallets.

Queen Rearing Hotel

This fully assembled, four compartment queen rearing box provides a good tool for raising your own queens. This unit accomodates full sized frames and provides the option of putting in a frame that has a queen cell on it to allow it to emerge. Then, after she has emerged and mated, you can take the frame with the mated queen and put it in any of your other hives where needed. Each compartment allows two frames, but other numbers of frames can be used by removing the glassboard dividers. Will need a migratory or telescoping lid (see pages 22 & 23) to complete the setup.

Top Feeder

With each compartment holding one gallon, this two compartment feeder sits on top of the hive boxes, just under the inner cover. Bees access the feeding area through an open slot that runs cross-ways in the middle. After syrup is poured into the compartments, pine slatted floats can be placed on top of the syrup, preventing drowning. The bottom is recessed 1/8" to minimize rocking on burr comb left on the top bars of the box below it. When we assemble, seams will be caulked to ensure that it is leak-proof.

Honey B Healthy Products

We won't claim that you can keep bees in a greenhouse with no outside forage, but with these three products, we are providing for most of the nutritional and health needs of your colonies, all from the manufacturers of Honey B Healthy.

Honey B Healthy

An excellent tool in the arsenal against viruses and a stimulant for hive health. Made with essential oils including lemon grass and spearmint, this product has been a real boon for many who have used it, even saving some large beekeepers from disaster. We recommend mixing it with all syrup feedings and using it in a drench every time you visit the hive. Instructions for use are included.

Pollen Patties

Ready-to-feed Global Patties, made with 4% real USA bee pollen, 15.5% total protein, and a dose of Apis Biologix "Rocket Fuel", will give your honeybees a boost in brood production and health, and a balanced diet when they are unable to forage or when there is a shortage

of pollen. Feed heavily in the spring for a faster build-up, and slower in the fall for a more steady build-up before winter, optimally with a carbohydrate source such as nectar or sugar syrup. Global patties have the effectiveness of three times increase of brood and 20% more adult bee population over other brands.

Super Direct Fed Microbials

Super DFM (Direct Fed Microbial) is an all natural microbial probiotic supplement to be applied straight over the brood nest top bars. Every serving of Super DFM contains 7 billion CFU's (colony forming units) of lactic acid bacteria, which work together to create optimal bee gut health. This helps to optimize diges-

tion and nutrition, helping the bee to combat chalkbrood, fight mites, support pesticide detoxification, and increase hive immunity. Apply once a month. Highly recommended.

Green Drone Frames

This wax coated plastic frame can be used in two ways. Raise more drones of your favorite genetics to increase drone population for mating purposes. Or, perhaps more importantly, in this age of mites, use it as a tool to reduce mite population. Put these drone frames—you will always recognize them by their conspicuous off-green color—into the brood chamber. One per hive is enough. Pull the frame when the drone brood is capped and replace with another drone frame. Put the removed frame in the freezer. Repeat the cycle every three weeks. Mites prefer drone brood and by doing this you will greatly reduce your mite popula-

tion. But WARNING! Keep track of your timing! Ifthose drones start emerging before you pull the frame, you have created a mite farm instead of a mite eliminator!

| Bucket with Honey Gate and Strainer Set (described below) | 3.36 # | BGS | 49.38 |

Ultimate Capping Slicer

This nifty plastic tool from BeeSmart has two choices of slicing depths and a pry bar at the opposite end. Similar to a capping scratcher, but intended to cut, not tear the cappings- a little less mess. Works well with the Ultimate Uncapper on the next page.

Stainless Steel Honey Gate

Tired of breaking plastic honey gates? This high quality, stainless steel gate provides a superior solution. With a 1.5" diameter female thread, it can be used on any of our Hillco Maxx tanks and extractors. You can try it on a bucket, but it's not ideal. Requires a 1 3/4" drilled hole if installed on other tanks. Not drip free.

Dripless Bottling Valve WHILLCO

Truly, dripless! No more wiping honey off the edge of the honey gate, or waiting for it to stop dripping! Simply pull down the handle and honey comes out. Release the handle, and it stops, immediately! With the speed, accuracy, and smoothness of this valve, your bottling experience will improve greatly! Heavy duty construction, this valve is

ready for the serious honey bottler! Assembled in the USA.

Hive Butler Uncapping Tub

By altering two Hive Butler totes, Hive Butler has created a smart system for the small beekeeper's uncapping needs. This combination of totes provides an upper tub with a screened bottom for draining cappings and contains slots in which to hang the uncapped frames until you are ready to extract them. A frame with a spike in the center is also provided to make uncapping easier. This upper tote nests inside another tote that collects the honey draining from the cappings and frames. This honey can then be drawn off through the honey gate. A solid lid can be snapped on top to keep bees and dirt out until you can clean up the mess. By purchasing an additional lid, a total of 20 CAT# Price frames can be stored in these totes in the off season. Storing frames with these greatly reduces risk of wax moth infestation.

Professional Uncapping Tank HillCo

Looking for a heavy-duty uncapping tank to match with your growing extracting equipment line-up? Here are 3 sizes to choose from. Constructed from quality stainless steel. A large pair of grates is included to catch the cappings and drain the honey downwards. The v-shaped tank bottom funnels down towards the honey gate. Four locking caster wheels allow the tank to be maneuvered easily and lock in place. It works well with both deep and medium frames.

| Size | Frame Capacity | SHIP WT: | CAT# | Price |

| | | | | |

Slicer Roller Uncapper HillCo

A simple and affordable uncapper for the serious hobbyist and sideliner beekeeper! Electrically heated disk knives effortlessly slice your cappings open in one in-and-out pass. It preserves the comb so that the bees spend less time rebuilding comb, and more time making honey! This device easily mounts to most stainless steel uncapping tanks.

Spring Feet \times HillCo

Unsettled by that extractor wobble and shake? No matter how hard you try, it is very difficult to get those honey frames completely balanced. And many times bolting it to the floor isn't

feasible or easy. Solve this problem with a set of spring feet. Choose from three size options (depending on the size of your extractor). When you place your order, we will help you determine which one is best for your extractor.

Food Grade Grease

Don't risk contaminating your extractor or other food grade machine with grease from your local auto or farm store. This grease from Schaeffer's Lubricants is manufactured from highly refined non-toxic paraffin, and other anti-microbial agents to protect from rancidity and bacterial growth. Use to lubricate any ball, roller, or sliding bearing where there is a chance of incidental food contact.

Honey Pump WHillCo

This compact, durable, 1/3 hp stainless steel pump with a food grade rubber vane impeller provides an economic and trouble free way to transfer honey from the clarifier to a tank or from tank to tank. The 3-phase VFD controlled motor is powered by ormal 110 volt single phase and allows variable speed control.

Features:

- 1/3 hp variable speed reversible
- Worm drive gearbox with all steel gears
- Stainless steel pump housing with rubber vane impeller.
- Pump capacities at 70 degrees: Pump lift suction: Up to 12' vertically; Pump head (output): Up to 20' Vertically; Speed approximately 4 gallons per minute.
- Pumps 45 degree honey (speed, suction, and head varies with temperature)
- Not self-priming. However pump primes easily and does not lose prime quickly.
- Replacement rubber impellers available
- 1 1/2" stainless barbed hose connections.
- 3-year warranty

Hive Alive Fondant

Why look any further for a healthy, convenient bee food for the winter? With a 2-year shelf life, these all-natural patties are easy to store and use, and don't invite robbing like syrup can. Contains Hive Alive's unique blend of Irish seaweed extracts, vitamins and amino acids selected to help defend colonies from stress and promote bee health.

Pro-Winter Feed

Pro-Winter Feed is another tool for winter survival. Because it is high in carbohydrates and low in protein, it will not stimulate brood production. Just place 1-3 pounds under the inner cover (or between two brood chambers.) As brood begins in the spring, switch to a protein suppliment such as the pollen patties on page 46.

| Size | SHIP WT: | CAT# | Price |

Superfuel Probiotic Fondant

Rich in probiotics and other nutrition that supports bee health, SuperFuel Fondant is formulated to supplement natural nectar dearths in stress periods, and to build up colony populations during critical times. This fondant is an excellent winter feed.

Cut this 10 lb. brick into the amount your hive needs, averaging 1-3 pounds per hive. Place it on top of the frames under your inner and outer cover.

Winter Chip Box

Moisture, not cold, is a contributing winter-time enemy. Fight it with our chip box. Designed to hold about three inches of sawdust/ woodchips above a screen floor to soak up condensation. A 3" cavity below the screen allows for feeding with the sugar brick (page 68) and protein supplements in the spring. Approx. 5 lb. bag of pine wood chips included with each box.

View of middle screen between chips and feeding space

76 Books & Education

First Lessons in Beekeeping

Keith S. Delaplane, 166 Pages

First Lessons in Beekeeping provides the new beekeeper with informative text and liberal color photos that demonstrate the techniques described. This edition features a touch of beekeeping history along with the modern practices needed for success with honey bees. Although designed to guide the beginner in the first steps to becoming a beekeeper, this book is one that all beekeepers can enjoy.

First Time Beekeeping

Kim Flottum 128 Pages

Does beekeeping look exciting yet daunting? This book is for you. It is an excellent step-by-step manual for the very basics of beekeeping, including setting up and caring for your colonies, finding a good location for them, practical maintenance tips, bee problems and treatments, harvesting honey and overwintering.

Natural Beekeeping Revised and Expanded Edition

Ross Conrad, 285 Pages

Want it organic? Or as organic as keeping bees can be? Ross Conrad's *Natural Beekeeping* is about as good as it can get. Good for the hobby beekeeper, but not exactly where you want to start. Be sure to get the basics before launching into a practice that will require higher levels of commitment and management.

The Beekeeper's Handbook

Diana Sammataro & Alphonse Avitabile, 190 Pages

A good option for getting started as a hobbyist, or sideliner, or commercial, as the case may be. *The Beekeeper's Handbook* lets few stones unturned when it comes to management and what goes on in the bees' world.

The Hive and the Honey Bee

Dadant and Sons, 1324 Pages

A very comprehensive book, *The Hive and the Honey Bee* takes a chapter approach to exploring everything about bees. Much the same content as *ABC & XYZ*, just not as encyclopedia oriented with it's scope and scholarship. This book could probably pass for the "Bible" of beekeeping.

ABC & XYZ of Bee Culture

Al Root, 911 Pages

Just as the name suggest, ABC & XYZ of Bee Culture is the beekeeper's encyclopedia. With topics arranged in alphabetical order, you can look up anything about bees: anatomy, history, problems, people, methods, do's, and don'ts. Very readable with pictures and diagrams.

OTS Queen Rearing

Mel Disselkoen, 162 Pages

We regard the "on-the-spot" queen rearing manual essential for rasing your own queens, requeening, and making increase. It's not a magic wand but if the method is understood and followed carefully you should increase your beekeeping success rate and minimize losses from incompetent queens, old winter bees, and mites. Yes, that's what I mean, but you have to buy the book to find out why and how.

Beeswax Candle Molds

We are happy to offer you a collection of basic items for your candle making hobby! Our flexible molds will endure hundreds of pourings, leaving you satisfied with beautiful, exquisitely detailed candles again and again!

Basic steps to make candles:

- 1. Spray Mold Release inside your mold.
- 2. Thread the wicking through the hole at the bottom of the mold. Pull the wick 6" longer than the mold.
- 3. Make sure the seam in the mold is matched up as closely as possible. Secure the two halves with rubberbands.
- 4. Secure the wick over the top of the mold (bottom of candle) using items like bobby pins or popsicle sticks. Keep the wick centered and straight but not too tight. Wick that is too tight or too loose will affect how your candle burns
- 5. Pour your melted wax into the mold slowly and carefully.
- Let your candle cool slowly. When completely cooled, remove the rubberbands and pull apart the seam.
- 7. Remove the candle from the mold and trim the wick at both ends.

Do we have dealerships?

Absolutely. Would you like to save shipping costs and pick up your order from a Beeline dealer close to you? On the previous page spread, pages 82 & 83, you will find contact information for our dealerships across the country. Find the one closest to you and contact them to make sure they have what you want and arrange pickup with them.

Our dealerships are not required to carry a full line of Beeline's products, so some may carry more of our products than others. But they exist to cut down shipping costs for you, so at least check with them! If they cannot provide the item(s) you are interested in, you may order directly from us.

Our dealerships are also not required to sell their products at our catalog pricing, so be prepared to pay different pricing than what is listed in our catalog or website.

No dealer in your area? Perhaps you or someone you know can help fill in the map!

Can you become a Beeline dealer?

Quite likely. Our primary objective in establishing a dealership network is two-fold: to cut shipping costs for the customer and to broaden our customer base. By establishing dealerships across the country and shipping bulk to them, end customers can save shipping costs by driving to their local dealership to pick up their wares. In our supplier and dealership relationship, we want to work together for the good of the end customer. Our dealerships can be temporary (one time order for one year), or more permanent (standing yearly dealeship status). Each comes under the same policy. To view the complete

Dealership Policy, please contact your nearest branch and ask for a mailed or emailed copy or visit this web page: www.beelinewoodenware.com/dealerships.

Our dealer program is separated into three levels: Drone Level, Worker Level, and Queen Level. The benefits and requirements of this 3-Bee program are summarized in the chart below.

Who can deal? Anyone can deal who meets our requirements—sideliners, commercial beekeepers, hobbyists, dealers of other manufacturer's equipment, the retired, or anyone who is looking for a sideline or full-time occupation and a bit of income. To establish a dealership, we would need a state sales tax ID# to confirm resale status and a signed dealer application stating your willingness to cooperate with our policy guidelines. Find a copy of this application form at the back of the Dealership Policy that you request from us or that you download from our website.

Call or email your nearest Branch to determine elegibility in your location. We will review the protection status of any existing Beeline dealership near you and accept or decline your application accordingly. A dealer's protection status is determined by their initial order totals, or annual sales totals, according to the level that they choose. See chart below.

When figuring dealership discounts, all catalog quantity breaks and discounts are disregarded. If you are not able to meet the requirements for a dealership, we also welcome wholesalers based on our catalog quantity pricing.

We also welcome associations, clubs, and bee schools to pool orders that can be eligible for dealer discounts without the dealership status. See more information about this in our policy.

Are you interested in joining our dealer network, filling a spot on the map, and pursuing a new income opportunity? Contact us!

| | Drone Level | Worker Level | Queen Level | |
|---|---|---|---------------------------------------|--|

^{*}There are some specialty woodenware products that are not eligible for discounts.

Download our dealership policy here: www.beelinewoodenware.com/dealerships

To place your order:

We prefer small orders to be placed and paid for online as much as possible. Shop online at www.beelinewoodenware.com.

A printable order form is also available online to download and fill out. You are also welcome to call or e-mail your nearest Beeline branch in MI or WA and be prepared to provide the following information:

- 1. Name
- 2. Mailing and Shipping address
- 3. Phone number
- 4. Email address (optional)
- 5. Quantities and Catalog numbers for products you are ordering.
- 6. Credit/Debit Card information including 3-digit code and billing address. (We do not recommend emailing credit card info. Please call instead.)

Product Pricing

In our catalog and on our website, all product prices include a percentage to cover shipping costs in order to provide "free shipping" on most orders over \$150. Due to fluctuating raw material costs, prices are subject to change without notice.

State Sales Tax

We are required to collect sales tax in the states of Michigan, Indiana, Pennsylvania, and Washington. If you are exempt from sales tax, we are required to file a signed tax exemption certificate. Please call or email us for that form.

Payment Terms

We expect payment up-front for small orders in the form of credit card or check. For orders over \$1,000, we expect a 50% down payment before shipping, with the balance due within 30 days of ship date. We accept cash, check, or credit card payment. Please make all checks payable to "Beeline."

After 30 days from invoice date, the bill will be subject to a finance charge of 1.5% per month. If payment does not meet these terms, Beeline reserves the right to require other payment terms for future business.

Turn-around Time

Orders will be processed as quickly as possible. We will try our best to fulfill catalog and online orders within 2 business days and will notify you of any delays. Orders received after 12 noon will not be processed until the following business day. Skid-sized orders over 200 pounds may require up to a week or more, especially at peak season, which is generally January through June. Order early to ensure timely delivery. Full truckload orders usually require 1-2 months of notice. If you need something faster, just let us know. We'll check our inventory and schedule to see if we can accommodate it.

hipping

Orders can be picked up at our facilities by appointment or they can be shipped to you.

We are using UPS, FedEx Ground, or the US Postal Service for smaller boxed orders, and whichever LTL shipping company offers the best rate to your location for palletized shipments.

We offer free shipping on most small orders over \$150. Orange prices throughout this catalog qualify for free shipping. All black prices, which is usually higher volumes of product, do not.

For shipping estimates on all small orders under \$150 and larger orders that do not qualify for free shipping, please contact us. We will calculate the shipping costs as accurately as we can with small parcel carriers such as FedEx, UPS and USPS, or with LTL carriers. You may also want to check the dealership list on pages 78 and 79 to see whether you could drive for your wares.

On any shipments that do not qualify for free shipping, we include a handling fee. On palletized shipments, we include a pallet fee.

With the best of efforts in our stock-picking, we can still miss parts. If this occurs, give us a call, and we will take care of the issue according to our return policy. Call if you want more information on this policy.

Pick Up Orders

Orders can be picked up at your nearest branch within store hours or by appointment. All orders picked up at a Beeline Branch will recieve a 10% discount from catalog or website prices.

Backorders

If your order contains out-of-stock items, we will contact you by phone or email with several options. We can ship your order without the backordered item and send the backordered item(s) separately, with additional shipping and handling charges. We can hold your order until the backordered product is available. Or you may choose to cancel that part of your order. We also have the option of filling your order in part or entirely from one of our other branches.

Returns

Products may be returned to the Beeline Branch you purchased from if they are in as good a condition as you purchased it, and if you have the original invoice number. Please call the branch from which your order was shipped for verification.

For all returned merchandise that was shipped accurately but is no longer wanted, the return shipping cost must be the customer's expense. For all replacements for damaged items, or mistake corrections, return shipping costs will be covered by Beeline. No returns or exchanges may be made on beeswax foundation, medication, containers, glassware or bee food. All products shipped from our facilities are shipped F.O.B. and become the customer's responsibility.

For more information about our company terms and conditions, visit www.beelinewoodenware.com/terms-conditions.

^{**}Beeline's Catalog & Website prices are higher to accomodate free shipping. Please request dealership pricesheets for your dealer level cost and Beeline's base price.
